SUMMARY

Software Engineer with hands-on experience building full-stack web applications using Python, Django, Django REST Framework, React, and relational databases. Skilled in designing REST APIs, implementing authentication and role-based access control, and developing scalable applications across e-commerce, education, healthcare, and AI-powered systems. Focused on writing clean, maintainable code and building practical, well-structured software solutions.

EXPERIENCE

MicroMart E-Commerce Platform

- Developed a full-stack e-commerce platform featuring **product catalog, search, filtering, PC Builder, cart, checkout, orders, reviews, and admin dashboard**.
- Built RESTful APIs with **Django REST Framework** and React/Vite frontend using a layered service architecture for centralized business logic.
- Implemented **transaction-safe inventory management and server-side payment verification** to prevent overselling and fraudulent payment confirmation.
- Maintained extensive automated testing with **1,372 backend tests, 62 frontend tests, and 13 Playwright E2E specs**.

EDUCATION

B.Sc. in Computer Science and Engineering (CSE)

Independent University, Bangladesh

09/2022 – 12/2026

Dhaka, Bangladesh

SKILLS

Languages: Python, JavaScript, SQL, HTML, CSS, Java

Backend: Django, Django REST Framework, Django ORM, REST API Design, JWT Authentication

Frontend: React, React Router, Tailwind CSS, Context API, Vite, Bootstrap

Databases: MySQL, PostgreSQL, SQLite, Database Design & Normalization

Tools & DevOps: Git, GitHub, Linux, Postman, Environment Management, Render, Railway, Vercel, Netlify

Others: REST APIs, Authentication & Authorization, Role-Based Access Control (RBAC), API Integration

LANGUAGES

English(Professional Working Proficiency)

Bangla(Native)

CERTIFICATES

- Full Stack Web Development
with Python, Django & React-
Ostad

PROJECTS

EduFlow

Learning Management System (Django REST Framework, React, MySQL)

GitHub : <https://github.com/jhraihaan/Learning-Management-System-django-react> ↗

- Full-stack LMS with **role-based access control (Admin, Teacher, Student)**, phone-based JWT authentication, and academic resource management.
- Built RESTful APIs and React interfaces for **courses, lessons, assignments, enrollments, submissions, and results**, with responsive Tailwind CSS UI.

Medi Desk

Hospital Management System (Django, DRF, React, PostgreSQL)

GitHub: <https://github.com/jhraihaan/hospital-management-system-django-react> ↗

- Full-stack hospital management platform for **patients, doctors, appointments, prescriptions, billing, and medicine inventory**.
- Implemented **JWT authentication and role-based access control** for Admin, Doctor, Patient, and Receptionist workflows, with protected React routing and RESTful API integration.

IntelliChat

AI Chat Application (Django, React, PostgreSQL, Redis)

Github: <https://github.com/jhraihaan/Intelli-Chat> 

- Built a full-stack **AI chat application powered by Google Gemini** with token-by-token response streaming, persistent conversations, Markdown rendering, and syntax-highlighted code blocks.
- Implemented **JWT authentication, Server-Sent Events (SSE), Redis-based rate limiting**, and a secure server-side Gemini API integration with user-scoped conversation access.
